"CALEO" HEATING PLATE

riversystems.it

River Systems has developed a **new heating plate**, ideal for chicks up to 30 days old, which supplies the necessary warmth normally provided by the hen in the early delicate stages of life.

Thanks to the **special patented heating technology**, the CALEO heating plate generates constant and well-distributed heat over its entire surface: in all comparative tests carried out so far by River Systems, chicks from different hatches always preferred it to other heating plates.

Available in **two sizes** (model 700 and model 1400), the CALEO heating plate benefits from an innovative technology that makes it particularly **efficient** and extremely **fast** in reaching the temperature of use. It is also **safe** as it can never reach temperatures dangerous for the chicks. To be used indoors.

Caleo model 700

Dimensions: 305x230 mm, capacity 20 (max. 25) chicks

Caleo model 1400

Dimensions: 305x430 mm, capacity 40 (max. 50) chicks

PRODUCT DETAILS

Product design

makes CALEO easy to clean also thanks to its mirror-polished surface.

Insulation panel

inserted into the frame of the heating plate.

Radiant heating plate

patented.

Adjustable height

from 30 to 160 mm from the ground, it can be determined thanks to the graduated scale on the four legs

Power supply included

the 700 model is powered at 15 volts and 12 watts. The 1400 model is powered by 24 volts and 30 watts.

Covering

covered by a registered design, it is supplied as an accessory on request. It is recommended to keep the plate clean and to reduce energy consumption.
